

Stainless Steel Brushed or Polished

Cleaning

Stainless steel is durable and does not require any particular type of maintenance. Simply wipe with a soft cloth.

Make sure to wipe the steel with a dry cloth after washing the floor to avoid stains.

Use a cleaning agent specifically designed for stainless steel when encountering tougher stains. Always follow the instructions closely when using a new product.

✗ **DO NOT use any type of chlorine-based liquids on stainless steel, as this will cause corrosion.**
